

Discount Moissanite

Discount Moissanite

now available on earth

The graphic features the word "Moissanite" in a white cursive font at the top. Below it are three square images: a person's chest with a gemstone, a white flower, and a large faceted gemstone. At the bottom of the graphic, it says "Stardust Gemstones" and "www.moissanite-stardust.com".

Moissanite is very hard to differentiate from diamond and can fool many gemologists. It does have many similarities. It is very hard at 9.25 (diamond is 10) and it is highly refractive (sparkles more) with an index of refraction of 2.6 – 2.7 (diamond's IR is slightly lower at 2.42). Most important, moissanite and diamond are thermally conductive and it is this property that is used as the test for the authenticity of real diamonds. Also natural flaws are absent in moissanite replaced instead by tiny, white, ribbon-like structures that are a result of the growing process. Will not dull or end up looking like salt rock. Lifetime Guarantee. 10-day refund policy.
